

Solutions in Paints and Coatings

Great Solutions with Small Particles

Sachtleben

As a specialist in ultra-small inorganic particles, Sachtleben provides individual, innovative solutions.

Our core capability is located in the production and functionalization of ultra-small inorganic particles in the nano and micrometer range.

This know-how is based, not least of all, on our decades of experience in the production of the most diverse range of particles on a titanium dioxide and zinc/barium basis. The challenge for us is now the development of tailor-made solutions to meet our customers' specific needs.

Quality

Quality-awareness in development, production and all services for our customers is an essential element in our thinking and our actions. Continuous improvement of our processes in order to optimize the quality of our products, and of our environmental, health and industrial safety, are thus a basic obligation imposed on all our employees.

Specialities for paints and coatings

Sachtleben products are already in use in a wide range of applications in the coatings industry. Our pigments, inorganic additives and functional fillers product range meet the demanding needs of a variety of coatings applications.

Service

Sachtleben has a far-reaching sales and marketing network, with the result that you will find highly qualified and capable contacts on-the-spot in more than eighty countries.

Certification

- ▶ Sachtleben is certificated in conformity with Deutsche Gesellschaft für Qualitätssicherung standards ISO 9001/14001/22000 for the fields of development, production and sales/marketing of white pigments and fillers/ extenders and sulfuric-acid plant products.
- ▶ In addition, our products, plants, systems and packaging have also been certificated as Mehadrin kosher.
- ▶ Halal certification was awarded by HALAL CONTROL e.K.
